TITLE OF THE THESIS

SUBTITLE OF THE THESIS

DISSERTATION

to obtain
the degree of doctor at the University of Twente,
on the authority of the rector magnificus,
prof.dr.ir. A. Veldkamp,
on account of the decision of the Doctorate Board,
to be publicly defended
on TBD the TBDth of TBD 20XX at TBD

by

Gustavo Luvizotto Cesar

born on January 1, 1970
in the Netherlands

This dissertation has been approved by:

Supervisors:
TBD

Co-supervisor:
TBD

Acknowledgements

That's all folks.

Abstract

Test

Samenvatting

Nederlands taal.

Contents

1 Introduction **1**

2 Background **3**
2.1 Anycast 4
2.2 TLS 4
2.3 LDAP 4
2.4 Email Security Protocols 4

3 Sample Chapter **5**

4 Conclusions **7**

Bibliography **9**

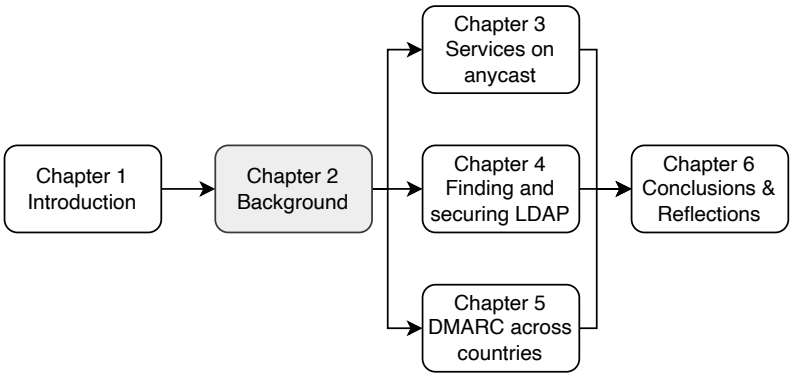
CHAPTER 1

Introduction

My intro [1].

CHAPTER 2

Background



This chapter provides background information on Anycast, Transport Layer Security (TLS), Lightweight Directory Access Protocol (LDAP), and email security protocols such as Sender Policy Framework (SPF), DomainKeys Identified Mail (DKIM), and Domain-based Message Authentication, Reporting and Conformance (DMARC). This information is necessary to to understand the subsequent chapters. Our goal is not to provide an exhaustive description of the aforemetioned topics, but rather offer sufficient details relevant to this thesis.

2.1 Anycast

When a user connects to an anycast address, Border Gateway Protocol (BGP) directs the request to a single Point of Presence (PoP), typically one that is topologically close to the user [2], from which the service replies. A common misconception is that announcing an address at multiple locations, in itself, is classified as anycast. Many Content Delivery Networks (CDNs) announce their prefixes at multiple network edges (in different geographic regions), where they route traffic internally to a single PoP hosting the service. Critically, as defined in RFC 4786 [2], anycast is the replication of a service address where several PoPs make the service available.

2.2 TLS

2.3 LDAP

2.4 Email Security Protocols

2.4.1 DKIM

2.4.2 SPF

2.4.3 DMARC

CHAPTER 3

Sample Chapter

Sample chapter [1].

CHAPTER 4

Conclusions

Some conclusions.
